Senior Full-Stack Engineer

SUMMARY

Senior Full-Stack Engineer with **7+ years** of product engineering experience and strongest depth in **React, Next.js, and TypeScript**. Owns features end to end across product UI, **Convex** serverless workflows, APIs, **real-time video**, **Stripe** payments and payouts, and role- and tenant-scoped access. Raised patient-registration conversion from **below 10% to above 40%**.

TECHNICAL SKILLS

Core Frontend: TypeScript, JavaScript (ES6+), React, Next.js, semantic HTML, modern CSS

Backend & APIs: Node.js, Convex serverless workflows, REST and GraphQL APIs, webhooks, SSR data loading

State & Data: TanStack Query, Zustand, Redux, React Context, caching strategies

Real-Time & AI: Daily.co/WebRTC, WebSockets, Soniox transcription, doctor-reviewed AI report workflows

Payments & Access: Stripe payments, commissions, wallets, payouts, authentication, RBAC, tenant isolation

Architecture & Performance: Component architecture, design systems, versioned NPM packages, code splitting, Core Web Vitals

Quality & Product: Cypress E2E, ESLint, TypeScript constraints, GitLab CI, PostHog, Metabase funnels, A/B testing

WORK EXPERIENCE

Senior Full-Stack Developer | Dec 2025 - Aug 2026

Levita Health, Barcelona, Spain (Remote) | Telemedicine Platform

- Took ownership of incomplete patient and doctor applications and brought both to production within **two months**, delivered the admin portal in under **three weeks**, then added clinic and pharmacy workflows on a shared **Convex** backend.
- Raised conversion at the main patient-registration step from **below 10% to above 40%** over 1-2 months by instrumenting **PostHog** funnels, simplifying onboarding, and A/B testing payment placement.
- Built a **Stripe** payment and payout workflow that collected payment before booking, allocated an approximately **70% doctor share** to in-app wallets, and routed admin-approved withdrawals to clinicians.
- Replaced external Google Meet handoffs with an in-product **Daily/WebRTC** consultation flow and routed **Soniox** transcripts into doctor-reviewed AI reports, cutting post-consultation documentation from roughly **15 minutes to under 5**.
- Implemented **role- and tenant-scoped access** across patient, doctor, admin, clinic, and pharmacy portals, isolating sensitive records behind fail-closed authorization checks.

Senior Front-End Developer | Sep 2023 - Dec 2025

Roomvu, Vancouver, Canada (Remote) | Real Estate Tech (SaaS)

- Owned end-to-end frontend delivery for **Listing Videos** within a subscription platform serving approximately **400K paid users**, enabling agents to customize, preview, schedule, and publish branded property videos across major social channels.
- Increased **Subscribe-button** conversion on a campaign page by approximately **30%** by prioritizing image loading, adding **HLS** streaming, and reducing initial-page friction, measured in **Metabase** funnels maintained by the data team.
- Extracted reusable video players into independently versioned **NPM packages** and enforced migration off deprecated packages through TypeScript and ESLint rules; served as the team's only dedicated frontend engineer for the final **eight months**.

Lead Front-End Developer | Sep 2020 - Sep 2023

A.P.P Software Solutions, Mashhad, Iran (On-Site) | Software Consultancy

- Built Top Menu's frontend from the ground up to support more than **400 restaurants** on renewable annual subscriptions and over **500K monthly menu visits**.
- Cut initial load from roughly **2 seconds to under 1 second** by splitting a **4MB** bundle into lazy-loaded route chunks; replaced Redux and manual caching with **TanStack Query** and SSR-backed data fetching.
- Led weekly sprint planning for a rotating team of **4-5 developers**, recruiting, onboarding, mentoring, and reviewing code.

Front-End Developer | Apr 2019 - Sep 2020

Hoomaan, Mashhad, Iran (On-Site) | Digital Agency

- Delivered a **four-application production ecosystem** for a large hypermarket, spanning customer ordering, store administration, barcode-based inventory, and **WebSocket**-powered live courier tracking.

EDUCATION

B.Sc. in Computer Engineering

Shahrood University of Technology | 2016 - 2020

LANGUAGES

English - Upper-Intermediate (B2) | Persian - Native
